Raghu Saripilla

BI/ETL/Data Engineer(Azure/Databricks/MS Fabric)/Architect(Azure/MS Fabric) (Secret Clearance Holder, ITIL v4 Certified)

Canada

Summary

Currently working as a BI/Data Management consultant on Azure Platform

Experience

Global Affairs Canada | Affaires mondiales Canada

Data Management / Architect(Azure)

April 2022 - Present (4 years 6 months)

Canada

<https://www.canada.ca/en/government/system/digital-government/digital-government-innovations/enabling-interoperability/gc-enterprise-data-reference-standards/current-past-official-names-countries-territories-geographic-areas.html>

Evaluated tools specifically related to master data management & data quality on Azure Cloud & On-premises.

Worked on building an end-end Reference Data / Master Data Management solution (via Power Apps + Azure Synapse + PowerBI)

Worked on creating ETL using PowerBI Dataflows and deployed them across workspaces using deployment pipelines in PBI.

Built control table driven data pipelines(reusable) to load data from On-Prem – Cloud & Cloud – On-prem iteratively. (Full & Incremental).

Maintain data lake medallion architecture (Bronze, Silver, Gold) and suggest industry proposed best practices for efficient access and maintenance of the datasets.

Created Power Automate cloud flows between different Dataverse Environments.

Deep understanding of Synapse MPP Architecture and best practices involved to build Modern Data Warehouse.

Configured and enabled Azure Synapse Link for Dataverse and created synapse pipeline to load data from Dataverse -> Azure SQL.

Understand the existing Power Apps environments & how to integrate CDM data into the Azure cloud.

Worked on setting up and appropriately using Serveless SQL Pool, Dedicated SQL pool, Spark Pools on Azure Synapse.

Worked on creating pipelines on Azure Synapse to move tables/views from On-premises SQL server to Data Lake iteratively.

Worked on creating pipelines on Azure Synapse to insert data from Open Data Portals E.g. World Bank Data via API calls and land them to Azure SQL Database.

Performed evaluation of Azure Purview to establish Data governance & Metadata Management.

Help define data management/architecture deliverables required throughout the project gating process.

Develop templates/artifacts for those gating requirements (e.g. Data migration templates, Reference data list templates).

Transport Canada - Transports Canada

Data Engineer

August 2021 - February 2022 (7 months)

Worked on creating new ADF pipelines as per Client Standards to load data from On-prem SQL server/Oracle DB's into ADLS Gen 2(RAW).

Worked on creating new ADF pipelines as per Client Standards to load data from Dynamics CRM on cloud into ADLS Gen 2(RAW).

Understanding of various Activities/Parameter/Variables concepts within ADF & using them efficiently for iterative tasks.

Experience in creating ADF branch/pull requests and integrating code requests for seamless CI/CD pipeline deployments into Production.

Designed control/watermark framework to automate incremental load from Cloud application (such as Dynamics CRM) & On-prem Database (Oracle/SQL server).

Worked on creating Linked Services and Datasets to access various sources and store configuration details efficiently in Key Vault.

Experience in accessing .parquet files from RAW via Azure Databricks for further Data mining.

Designed solution and loaded data in Delta lake on Databricks using Pyspark/ Spark SQL based on the RAW files from various sources (i.e. On-prem DB's / Dynamics CRM / Excel Spreadsheets) into Curated zone.

Working with Stakeholders to understand data attributes and involve in data profiling to set naming standards and maintain data catalog.

Assist Client team and participate in their weekly design review discussions to present new pipelines developed and articulate any new design suggestions.

Understanding of mapping & wrangling data flow tasks to load transformed data into ADLS Gen2 or Azure SQL Database.

Working with PBI team to create reporting data model and walking them through the datasets in cloud.

Understanding of various data components within Azure and provide recommendation on best industry practices to client for their cloud data solutions.

Experience in understanding functional requirements provided by client and translating them to technical solutions on cloud.

Bruce Power

BI Consultant

January 2019 - July 2021 (2 years 7 months)

Toronto, Canada Area

Create and design Informatica integrations that use Web Services to communicate with applications such as P6(Oracle Primavera) & Ecosys.

Hands-on involvement in designing EDW and define modelling techniques (Star/Snowflake/DataVault/Canonical)

Performance tuned an existing legacy ETL flows which loads EDW(dimensions/Facts).

Extensive experience in writing and understanding complex SQL queries and translate them to ETL flows.

Migrating On-premise data to Azure SQL Data warehouse via Data Factory/ Automated Python scripts.

Serve as Lead ETL Designer for Bruce Power's first dimensional data warehouse (Information Mart) sourcing from Data Vault.

Created complex Informatica mappings to process data and generate XML files (via Web Service Consumer) and process to Maximo via ESB (i.e. IBM IIB)

Gained functional/technical understanding of Asset management system i.e. Maximo and nuclear specific applications i.e. Asset/Duty station/Work Order Management.

Technical understanding of Maximo Integration Framework (i.e. MIF) & Maximo BI analytics.

Understanding Database Configuration application & configure MIF (i.e. Object structures/Publish Channels/Enterprise Service) for placing the Inbound/ Outbound messages on appropriate Queues in Maximo.

Accessing/Visualizing data from Enterprise Warehouse/Maximo application via PowerBI/Cognos/BIRT (Maximo Inbuilt) reporting applications.

Rogers Communications

ETL Lead

December 2014 - December 2018 (4 years 1 month)

Brampton, Ontario

- o Take ownership of ETL design and all aspects related to ETL development
- o Technical mentoring of team members
- o Coordinate development effort with offshore development team.
- o Participate and conduct Code reviews once the code is unit tested and ready for QA
- o Ensure design and development standards and followed
- o Create project documentation (Detailed design, Source-to-target mappings, Implementation plans, Run books, etc.)
- o Provide accurate and timely progress status to development manager and Project manager
- o Assist in QA activities and resolve issues raised by QA team
- o Ability to translate and document business requirements into technical documentation
- o Work and collaborate with other Solutioning team and Business Analysts
- o Ability to work independently with minimum supervision
- o Ability to multitask and work on multiple projects simultaneously

John Hancock Financial Services

Etl Consultant

July 2014 - December 2014 (6 months)

- Creating complex Informatica mappings to load data from files into DB2 systems.
- Leading the ETL team and working with solution architects during the Design phase.
- Supervising and motivating the project team during the development phase.
- Providing daily project status to the delivery manager.
- Generate XML files and process those files into MDM systems and participating with MDM implementation.
- Participate in Data modelling and design decisions with stakeholders in order to provide optimal solutions.
- Design and developing Type-2 slowly changing dimensions for complex and large volume of data.
- Using right transformations as per the business needs and delivering the solution.
- Validating the incoming files by developing an automated process.
- Handling Administrator tasks of monitoring and processing the deployments.

CIBC

ETL Consultant

September 2013 - June 2014 (10 months)

- Translate user requirements to process and data requirements. Design application's technical infrastructure, such as specific databases, programming languages, utilities, and testing approaches.
- Design and/or integrate solutions for the processing of data and development of precise steps and processing logic across all platforms.
- Provide broad understanding of platforms and applications across all technologies.
- Ensure the designed specifications achieve business needs.
- Provides application support as required
- Carefully researches work effort required for each new initiative and is held accountable for commitments on development timelines
- Provides input, based on experience, around testing timelines required to ensure a fully tested ETL solution
- Using Autosys as schedule to monitor the jobs.

CGI

Informatica Consultant

June 2010 - August 2013 (3 years 3 months)

Working as Informatica Developer for US-based Health care client. Getting Involved and providing solution during the SDLC.

Some examples:

Providing Consulting and Advisory Services to clients as an Oracle Subject Matter Expert with skills in ETL Tools, to implement these tools into the client's current environment

Has provided analysis and recommendations on how to implement ETL tools in the client environment, then later perform below mentioned development

- Analyzing Data feeds and interfaces from a wide variety of systems
- Designing development schema for datafeed development, ETL feeds,
- Development of ETL feeds, stored procs,
- PL SQL development
- Ability to work within a changing environment
- Strong organizational and written/verbal communication skills
- Good presentation skills
- Positive attitude and working as a team are the key aspects.
